DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 05/17/2004 has been entered.

Claim Objections

2. Claim 86 is objected to because of the following informalities: Claim 86 recites:

"wherein the number of small compositional ranges of the aluminum oxide is adapted to form gradients in an electrical field", which should be:

"wherein the number of small compositional ranges includes aluminum oxide and is adapted to form gradients in an electrical field"

Appropriate correction is required.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686

Application/Control Number: 10/081,818

Art Unit: 2818

F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-2, 85, 3-10, 86, and 11-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of copending U.S. Patent Application No. 09/943,134 ("the '134 application"). Although the conflicting claims are not identical, they are not patentably distinct from each other.

The claimed invention of the '134 application caries all limitations of the present invention but fails to recite a product-by-process limitation. Specifically, each of claims 1, 10, and 18 of the '134 application recites "an asymmetrical low tunnel barrier intergate insulator" (or its variant -metal oxide intergate insulator including an asymmetrical metal oxide) and each of claims 1, 10, and 18 of the present application recites "an asymmetrical low tunnel barrier intergate insulator formed by multiple atomic layer deposition" (or its variant -metal oxide intergate insulator formed by atomic layer deposition including an asymmetrical metal oxide).

However, while a product-by-process claim, which is a product claim that defines the claimed product in terms of the process by which it is made, is proper (MPEP 2173.05(p)), the product-by-process limitation does not contribute to patentability (MPEP 2113 [R-1]: "[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself".

Art Unit: 2818

In the instant case, the product-by-process claims are proper and are limited by and defined by the process but are not patentably distinct from the claims of the '134 application.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

5. Similarly as detailed above in paragraph numbered 4, claims 1-2, 85, 3-10, 86, and 11-23 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of copending U.S. Patent Application No. 10/028,001.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tu-Tu Ho whose telephone number is (571) 272-1778. The examiner can normally be reached on 6:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, DAVID NELMS can be reached on (571) 272-1787. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
